IT Checkup

Wide array of solutions

from just one provider:

trouble-free IT

IT Checkup
Before planning anything new, we evaluate your existing system.

**Our checkup systematically compiles and analyses information about your existing
IT infrastructure so that we can plan optimisations and add-ons.**

We gather information on all the components of your IT infrastructure and their properties,
starting with the hardware used and extending to the network, security aspects, backups,
vulnerabilities and any installed software. The result is an extremely detailed and clear network
plan that gives you a comprehensive overview of the state of your IT infrastructure.
Afterwards, we talk you through the findings and inquire about your wishes and the goals you
want to pursue with your IT and your company.

Based on this information, we can develop tangible solutions with precise cost calculations for you.
The solutions are purposefully designed for:
- **Achievement of your requirements and goals**
- **Cost reduction**
- **Simplification**
- **Automation**
- **Security**
- **Standardisation**

We offer our IT checkup as a stand-alone service. If a suggested solution results in a
corresponding order, the checkup itself is free of charge.

The following elements, among others, are covered during the IT checkup:
- **Servers** Including hardware configurations and installed software
- **Terminals** PCs, notebooks, thin clients, etc., including hardware configurations and installed software
- **Printers and scanners**
- **Switches and routers**
- **UPS** Uninterruptible power supply
- **Data storage devices**
- **Backup strategy**
- **Update strategy** for operating systems and software
- **Firewall** Including external access
- **Checking for vulnerabilities**
- **Card readers and in-house automation** as well as other IT infrastructure components
