

# Switching Providers

Wide array of solutions  
from just one provider:  
trouble-free IT

## Switching Providers

IT is so essential that it absolutely must be put in capable hands.

**If you would like to entrust CSF with handling your IT or want to migrate your IT infrastructure to a secure data centre, we will make the smooth transition for you without disruptions.**

We have many years of experience in providing IT support for small, medium-sized and large companies with varying requirements. During this process, we are committed to the following:

- **Simplicity** for our clients
- Excellent and clear **communication**
- **Innovative** technology and services
- **State-of-the-art** technology at all times
- Solutions to suit **exceptional requirements as well**

If your current provider does not meet these standards to your satisfaction and leaves you in want of a premium-quality support and infrastructure solution, we will operate or transfer your IT without disruptions or problems. The technical complexity of this essential step should not affect your daily work routine in any way.

The new support services and technical solutions are adapted to suit your desired scope and price requirements, and they range from inexpensive standard offers to individually optimised solutions – always adhering to the ISO 27001 standard.

To that end, we would be pleased to provide you with space in the CSF data centre or operate your infrastructure on your premises. Thanks to our collaborative relationships with the following third-party providers, we can even offer you our services worldwide under attractive conditions:

- **Amazon AWS**
- **IBM Softlayer**
- **Swisscom** Switzerland
- **Green** Switzerland
- **Microsoft Azure**
- **mount10** Switzerland

When switching providers, you should also consider the following points:

- **Forward-looking planning**
- **High degree of flexibility**
- **Close cooperation**
- **Minimal disruption to business operations**
- **Smooth relocation** or **in-house operation**
- **Efficient and reliable operation**
- **High quality of services**
- **Transparent and clearly budgetable costs**
