

Private Cloud

Wide array of solutions
from just one provider:
trouble-free IT

Private Cloud

True convenience results from the right combination of openness and security.

Our customised cloud solutions combine the easy accessibility of public options with the stringent security standards from the industry.

Common cloud solutions are limited by the advantages of convenience and thus neglect security issues. This is why we came up with our own solutions that combine the best of both worlds and boast the following characteristics:

- **Scalable software features**
- **Automatic updates**
- **No maintenance expenditures**
- **Data protection**
- **Controlled access** thanks to authorisation
- **Secure operation**
- **Data centre location** of your choice

The cloud is always configured to meet your requirements. The most important options are:

- **Individual workplaces as a cloud** Desktop as a Service (DaaS)
- **Environment for analyses, development, databases** Platform as a Service (PaaS)
- **Complete IT infrastructure** Infrastructure as a Service (IaaS)

Among other factors, the security of a private cloud depends to a great extent on the data centre. Depending on the requirements, we have different options at our disposal.

- **CSF data centre** ISO 27001 – Switzerland
- Rented from **ColoBale** – Switzerland
- Rented from **Swisscom** – Switzerland
- Rented from **Softlayer (IBM)** worldwide
- Rented from **Mount10** – Switzerland

For applications without customised software features or security requirements, we assist you with the selection, configuration and operation of corresponding services from other providers. Some of the well-established solutions include:

- **Office365**
- **Exchange**
- **Azure**
