Workplace

Wide array of solutions

from just one provider:

trouble-free IT

## SeWo / Secured Virtual Workplace

A contemporary workplace is available wherever you are at any given moment in time.

**Our virtual workplaces are characterised by particularly high security standards, which is why they are called SeWo: secured workplaces.**

You can use a secured virtual workplace at any time and from almost anywhere. The only two things you need are an Internet connection and a laptop or tablet. The software of your choice is installed on this workplace. Any security-related updates as well as data backups happen automatically. The fact that we only operate secured workplaces using ISO 27001-certified data centres with three-tier architecture is the decisive factor for their high standard of security. This secured environment is what allows you to collaborate with external partners as easily as you would with internal staff members.

We offer a variety of secured workplaces best suited to each individual industry:

- SeWo for **SMEs**
- SeWo for **language service providers**
- SeWo for **financial service providers**

SeWo is also highly attractive from a purely business-related point of view:

- **Easily predictable costs**
- **No long-term contracts**
- **Low administrative output**
- **Uniform working** methods for employees

Depending on your individual needs and security requirements, we will adapt each secured workplace according to your wishes. Even subsequent add-ons and modifications can be easily implemented. If you have high security requirements, your SeWo will be based on a physically separated infrastructure.

The following security features set a SeWo from CSF apart from conventional virtual work-places:

- **Secured environment for exchanges with external parties** – a much safer system than e-mail
- **Secured workplaces for your external partners** adhering to the same standards
- Exclusively **ISO 27001-certified data centres** with **three-tier architecture**
- **Data centres seamlessly monitored** by CSF
- **Two-factor authentication** for access by external partners
- **The most up-to-date software at all times**
- **Virus definitions**
- **Recognition of and defence against attacks** by IDS and IPS

Apart from security, we also make your convenience a special priority:

- **Combined management of private and business IT**
- **Work environment** identical to your own PC
- **No limit on file sizes**
- **Folder structure** for correct storage
- **User management** with assignment of rights
- **Complete reports** for all workplaces
- **Backups and archives** are always created
