from just one provider:
trouble-free IT

New Locations

Relocations and new openings are made a great deal easier with a solid IT strategy.

This service ensures that the momentum of a new venture is not slowed by IT-related issues in a still unfamiliar environment.

Appealing market opportunities and promising partners are popular reasons for expansions and relocations. A well-planned strategy enables you to avoid serious IT problems and minimise delays in the course of such a project. After all, the more distant the location, the more unpleasant the surprises caused by a lack of infrastructure and other local factors can be.

Drawing on our many years of experience, we know exactly what you should bear in mind when launching such a venture. Creating a functioning IT infrastructure as quickly as possible is of the utmost importance to facilitate the establishment of a new location.

A timely location checkup is essential, especially when setting up subsidiaries abroad.

Points to consider include:

- **Power supply**
- **Network connection**
- **Legal restrictions**
- **Security**
- **Data access**
- **Autonomy**
- **Connection to headquarters**
- **Data transfer**

During implementation, we attach a great deal of importance to:

- **Thorough planning**
- **Adherence to the schedule**
- **Procurement of the right IT**
- **Configuring and testing of the IT** in Switzerland
- **Secure shipping**

We naturally assist you during the final stages, as well:

- **Set-up** of your IT on site
- **Opening and commissioning** of the location
- **Coaching sessions** for your IT managers
- **Ongoing operations**
